GENERAL DESCRIPTION

Datalogic's offer is now enhanced with the **DLL2020/21-W DIAMOND™** Presentation Scanner, capable of improving any type of Point of Sale application. Considering the importance given to space at Point of Sale, the **DIAMOND™** provides the most compact footprint so that it could fit practically anywhere.

The advanced technology applied to this compact scanner provides major benefits in reading performance and guarantees the highest "First-Pass" decoding rate. The ergonomics and ease of use are enhanced by the built-in protecting sleeve, which protects the unit from shocks and prevents possible drops from the counter thanks to the Antiskid feature.

Using a high visible laser diode, the omni-directional scan field of the **DIAMOND™** generates a scan pattern of 16 lines, capable of 800 scan lines per second.

The "single line" option represents a distinctive feature of the **DLL2021-W**. By pressing the button, this omni-directional device becomes a single line laser scanner allowing the user to correctly aim the laser beam at the bar code to be read in hand-held applications. The bar code is decoded once the button is released.

The EAS optional kit, which allows deactivation of EAS tags at the time of scanning, is another important feature provided by the **DLL2020/21-W** scanner.

A configurable "sleep" mode is available to minimise power consumption when the unit is idle. The **DIAMOND™** "wakes-up" by simply pressing the button on the upper side of the device. Connection of the **DIAMOND™** to the POS is guaranteed by an efficient series of plug-in cables. In addition, the **DLL2020/21-W** can be directly powered by the POS system, without the external power supply, reducing the number of cables near the counter.

The **DIAMOND's™** main features include compactness, flexibility, reliability and connectivity, making it a cost-effective investment that meets current and future Point of Sale requirements, as well as maximising customer service.
